

# CORE.21

*Technology at the Core of Education*

*Synergetics offers a technology assessment plan to target key technology skills to improve teaching and learning. A customized training plan is then created based on the results of the pre-assessment test. The training is followed with a post assessment to show growth and mastery of National Technology Standards.*

## CORE.21 Technology Assessment Package

Our package offers three main components:

Pre-Assessment, Customized Training, Post Assessment

Topics for assessment and training:

### Skills

To perform basic technology operations and concepts such as word processing, spreadsheets, printing, file management, email, and utilization of the Internet.

### Understanding

Digital work and learning that includes ethics, citizenship, responsibility; as well as 21st century learning experiences aligned with curriculum and assessment.

### Evaluation

Of the teacher's ability to find and use quality instructional technologies aligned to the curriculum for teaching and learning; including: software, Internet, Web 2.0 tools, and multimedia resources.

### Activities

Through creative lesson plans that facilitate and inspire learning and engage students and explore real world application of core curriculum skills.

### Instruction

That encourages critical thinking, problem solving, and creative skills for the classroom.
